Why so little difference?

Published on Sep 29, 2010

A recent Statistics Canada study found; "When it comes to fluoridating drinking water, Ontario and Quebec couldn't be further apart. Ontario has the country's highest rate of adding the tooth-enamel-strengthening chemical into municipal supplies, while Quebec has one of the lowest, with practically no one drinking fluoridated water."

But surprisingly, the two provinces have very little difference in tooth-decay rates. Why then would we want to potentially risk our health and spend taxpayers money to add hydrofluorosilicic acid to our drinking water?

Common sense tells you that adding a toxic industrial waste to our drinking water makes no sense.

Don't take a chance with your family's safety. We can only remove the risk by voting "No" to fluoride on Oct. 25th.
